

Linear Bar Grilles

Features

- All grilles, both with and without frames, can be manufactured with a hingeable access panel at one or both ends of the grille. The standard length of each panel piece is 150 mm, although this length can be varied upon request.
- Due to the large amount of possibilities offered by this type of grille, it is recommended to consult in specific cases with special dimensions.
- This range of grille has the necessary characteristics for its integration in contemporary architecture and interior design. They can be installed in ceilings, walls, consoles, fan-coils, induction units, both for supply and return air application and properly reinforced in floors.
- The maximum recommended length is 2 m in one piece, although 2 or more modules can be combined to give appearance of continuity.

Design

- Made of extruded aluminium
- Fixed blades at 0 degree, 15 degree, 30 degree
- Rigid, heavy gauge extruded frames with reinforced mitered and welded corners
- Standard finish white, other finishes are available
- Surface mounting or concealed mounting
- Size manufactured on request
- Construction is of a fixed core, while a hinged core option is available

General notes on the quick selection table

- Apart from the before-mentioned factor C_s (for grilles mounted in sill or floor), another correction factor exists for the distance of the grille to the ceiling, when mounted in a wall. For a free jet this factor C_h will be 1.6.

- Corrected throw = Throw
- C_h , with h in the graph the distance between grille and ceiling.

$$X_c = X \times C_h$$

SYMBOLS:

A_k – Effective area

V_k – Effective velocity in m/s

X – Throw in metres correspond to a terminal velocity in occupied zone of 0.25 m/s

Pressure (P_t) – All pressures are in Pa (N/m^2)

NR – Noise level index in dB based on a room absorption and one diffuser
